Technical Assessment

1. Problem Statement

Build a custom WordPress plugin or snippet to track product shares via a unique URL parameter, persist that ID in the visitor's browser, and log every add-to-cart action into a custom database table viewable in the WP Admin.

Rule: Do not use any existing referral or affiliate plugins. Implement the tracking logic from scratch. If using plugin mention that while submission.

2. Development Environment

Use either of the following:

- **LocalWP (Local by Flywheel):** Recommended for local development.
- **Open Cloud / Staging Space:** Any staging sandbox or personal server if preferred.

3. Technical Requirements

A. Capture & Persist (Frontend)

- Detect parameter in URL: `?uid_temp=STRING_ID`
- Store the value in browser `localStorage`.
- Ensure the value remains accessible even if the user navigates across different pages.

B. Cart Tracking (Backend & DB)

- On add-to-cart (both normal form submit and AJAX), retrieve `uid_temp` from `localStorage`.
- Save the event to a custom database table design fields accodingly:

C. Admin Dashboard

- Create an admin page under WooCommerce (e.g., "Cart Referrals").
- Display the logged entries in a readable table.

4. Evaluation Criteria & Deliverables

- **Security:** Proper input sanitization (`sanitize_text_field`), prepared database queries (`$wpdb->prepare`), and nonce verification.
- **AJAX Support:** Full compatibility with standard WooCommerce archive/shop page AJAX add-to-cart buttons as well as single-product form submits.
- **Admin Visibility:** The admin panel must display the recorded data clearly—including the tracking code (`uid_temp`), product items, quantities, and timestamps.
- **Test Link Verification:** We will generate and share a custom test code/URL parameter to test and verify the tracking functionality on your instance.
- **Store Setup:** A minimal e-commerce setup with a few demo products and Cash on Delivery (COD) enabled for checkout testing.

5. Submission Deliverables

- Submit a detailed PDF document with screenshots documenting your work, including all code implementations and changes made.
- If you host the site on a cloud/staging instance, share the live, accessible URL along with admin access (Username: `admin`, Password: `Admin#456Pass`).
- If using **LocalWP** (local machine), there is no need to share a public link now—keep the site and database ready to screen-share and demonstrate during the review meeting.
- Submit your deliverables using this Google Form: https://forms.gle/UQtYtHpTxdvjMTVF8
